Bespoke Software Development for a Tech Start-up

The client is a technology start-up company specialising in Data Privacy domain. The client is committed to help businesses unlock the value of using bespoke technology for processing sensitive information across their enterprise.

In the GDPR and other important data regulations era, and to cope up with increasing customer demands, the client has engaged Apex Software to assistant them in creating enterprise level products. They trusted Apex Software as a trusted partner to develop bespoke software using latest Microsoft Technologies overseeing design, development, testing & Live support.

Agile Software Development, Product Design, Live Support

Apex Software delivered two key projects for the client, including:

- Creation of product designs
- Full end to end software development
- Full end to end testing cycles
- Go Live and Production support
- Agile delivery
- Modern UX/UI responsive designs
- Product planning
- Regular Show and Tell Sessions
- Prospective client demos
- Application automation & reports development

Complete Support from Inception to Product Launch

The benefit to the client was, Apex Software could flex up and down, according to their requirement. At the peak, we were providing a full software development services that required five days a week of work for three consultants. Apex Software also advised on deployment models, IT Governance and delivered product innovation.

Our objective is to take the stress out of the CTO's day job, which allows them to focus on business strategy, business development and senior-level Board engagement.

"I would highly recommend Apex Software as a skilled .Net consultancy who delivers consistently and is a trustworthy high performer that I can rely on without the need to micro manage. I employed Apex Software to work with me on a decent sized greenfield project which was .Net based. Even now, several years on, the system is performing well, is well known for its quality/value and is deemed a valuable product to the business that can be relied on to manage the various event and business driven workflows. Apex Software consultant's knowledge and deep understanding of the various components in .Net and general architecture is impressive and they expertly puts it to good use on a day to day basis. They adapts quickly and is happy to dive in early and get hands dirty especially when working to tight timelines. I would happily recommend them and would gladly work with them again given the opportunity.."
